

BX-SOL

BX-SOL-CT

Loop Siren SecuriLine eXtended

The BX-SOL(-CT) can be connected directly to the fire alarm line. The volume can be set to either "Low" or "High" and the tone type is set via the fire alarm control panel, even during ongoing operation, depending on the event.

The siren is available in the colours red and white and corresponds to environmental category type A pursuant to EN 54-3, suitable for interior rooms.

The siren fulfils EN54-3 and EN54-17.

It meets the specifications of SecuriLine eXtended for operation on the ring circuit of the Securiton fire detection system SecuriFire and SecuriPro (only BX-SOL).

Fig. 1 BX-SOL

Description

The BX-SOL(-CT) can be directly connected to the fire detector line SecuriLine eXtended of the fire alarm system SecuriFire and SecuriPro (only BX-SOL).

The Loop Siren BX-SOL(-CT) is an addressable alarm unit for the acoustic alarming of a fire alarm in indoor applications. The Loop Siren unit BX-SOL(-CT) can be connected directly to the fire alarm line, mixed with other participants such as manual call points or automatic fire detectors.

It is available as the standard version BX-SOL and as the energy buffered version BX-SOL-CT. The MLAR variant BX-SOL-CT provides uninterrupted alarm transmission even if the fire detector line fails.

The different tone type are defined via software (SecuriFire: 4, SecuriPro: 3).

The required volume „Low“ or „High“ is set either via software or via DIP switch. (SecuriFire via Software, the DIP-switch has no function; SecuriPro: via DIP-switch).

The module includes a short-circuit isolator. In the event of wire breakage or short-circuit this functionality ensures that the fault is localised and that operation of the ring circuit remains fully functional.

Data sheet

Planning

Planning is to be carried out in accordance with the applicable standards and directives.

Acoustic loop units must not be used in combination with controlling of fire extinguishing system!

Up to 60 BX-SOL units can be planned per addressable loop. However, the maximum number of BX-SOL(-CT) units per addressable loop depends on the total number of all connected addressable loop devices, on the set sound volume, and on the application (standard or MLAR).

Application					
Standard		MLAR			
Volume low	high	Volume low	high	Mixed operation	
BX-SOL	60	30	20	20	No ¹⁾
BX-SOL-CT	43	23	40	23	Yes ²⁾

¹⁾ Operation with other loop devices for alarm transmission compliant with MLAR is not possible. In the event of a fault, the alarm transmission is interrupted for 5 seconds.

²⁾ Operation with other loop devices for alarm transmission compliant with MLAR is possible. In the event of a fault, the alarm transmission is not interrupted.

Depending on the set volume, the current consumption can vary. This has to be considered when making the loop length check and also the power calculation.

Programming / Settings

Volume setting

The volume can be set individually per loop siren.

SecuriFire:

Selection of the volume High/Low via SecuriFire Studio. The DIP-switch 1 has no function.

SecuriPro:

Selection of the volume High/Low via DIP-switch 1, see chapter Interface

Tone type setting

SecuriFire and SecuriPro:

The tone type can be set individually per loop siren via software. Furthermore, the tone type can be programmed depending of the type of event.

Notice

The BX-SOL is limited to these tones when using with SecuriPro:

- Permanent tone **not** pulsed
- DIN 33404-3
- EN 2575

Synchronisation

A synchronisation for the loop sounder BX-SOL(-CT) is carried out in combination with SecuriFire, but not with SecuriPro.

Mounting and Installation

In order to remove the siren from the socket, put the enclosed tool in the provided opening and remove the siren from the socket.

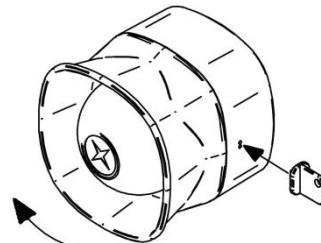

Fig. 5: Opening the housing

Drill out the mounting holes and cable entry at the indicated points in the base (see dimensioned drawing), insert cable, and screw the base onto the mounting surface. Connect the cable to the terminal block (see interfaces) and insert the signal transmitter into the base.

Dimensioned drawings

Maintenance

The provisions of the respective country in which the facility is operated basically apply for maintenance and inspection work on danger alarm systems.
